## **DETAILED ACTION**

### **Election/Restrictions**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

**Group I:** Claims 1-36 drawn to a system, method, and article of manufacture for modifying a model of a biological process responsive to experimental results generated by an in situ experiment conducted on an experimental platform, classified in class 702, subclass 019.

**Group II:** Claims 37-50 drawn to a method and article of manufacture for modifying a model of a chemical reaction responsive to experimental results generated by an in situ experiment conducted on an experimental platform, classified in class 702, subclass 019.

The inventions are distinct and divergent, each from the other because of the following reasons:

The inventions of Group I and Group II are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the inventions of Group I and II have different modes of operation.

The invention of Group I is directed to a system, method, and article of manufacture for modifying a model of a biological process responsive to experimental results generated by an in situ experiment conducted on an experimental platform. The invention of Group II, however, is directed to a method and article of manufacture for modifying a model of a chemical reaction responsive to experimental results generated by an in situ experiment conducted on an

experimental platform. In general, methods for modeling biological processes and chemical reactions rely upon biological and chemical data sets that are not co-extensive, as well as distinct mathematical algorithms. Therefore, these methods utilize distinct techniques that are separately classified and published. For these reasons Groups I and II have different modes of operation. Therefore, the burden of search is maintained as the examination process requires a search of non-patent literature, U.S. patent publications, U.S. patents, as well as foreign patent literature.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
